

Teleconference with the Examiner

On December 1, 2005, applicant and attorney for applicant had a teleconference with the Examiner. At that time, the applicant informed the Examiner that the instant paper would shortly be filed. Applicant and Examiner then discussed the meaning of the term "significant movement" as that term is used in the instant application and applicant presented his understanding of that term which involves a movement to a new position, wherein the movement is maintained for some period of time to allow for some reoxygenation of the compressed tissues. Applicant indicated that, based on the conversation, that a continuation or continuation in part case would be soon filed that would contain modifications to the current specification to make clearer the definition of "significant movement".

Amendments to the Specification:

No amendments to the specification are offered in connection with the instant Office Action response.
